

Marina Savelieva

Warsaw, Poland 03-731 | +48 889 363 108 | marina.savelyeva.42@gmail.com

Poland work visa | Polish Blue Card in progress | Available immediately

Professional Summary

Software Engineer specializing in TypeScript, React, and modern frontend architecture. Experienced in building data-heavy web applications, complex workflows, role-based interfaces, and reliable API integrations. Strong focus on accessible UI, application state management, performance, testing, and user-focused product delivery in cross-functional teams.

Applied frontend engineering expertise across MedTech, business applications, logistics, and financial management products. Experienced in Agile/Scrum environments with regular sprint planning, refinements, and retrospectives. Proactive about diagnosing and resolving issues end to end, and comfortable working in self-organizing, cross-functional, international and distributed teams alongside product managers, designers, and backend engineers. Mentors junior developers and shares knowledge across the team.

Professional Experience

Software Engineer

Innowise – Warsaw, Poland | 02.2024 – 06.2026

Built frontend features for enterprise web applications across financial management, medtech, and logistics domains, with a focus on data-heavy interfaces, complex workflows, API integration, performance, and maintainability.

- Payroll & Financial Management System (~100 internal users): Built information-dense UI for an internal financial platform on a legacy stack, working with large datasets, complex tables, filtering, pagination, form-heavy workflows, and API-driven screens. Refactored key modules while preserving existing business logic and improving maintainability.
- MedTech (~300,000 monthly users): Took ownership of a critical performance issue on a mobile page, diagnosed the root cause and resolved it end-to-end by introducing lazy loading, code splitting, and asset optimization, making the page stable across all devices. Led the implementation of responsive, accessible, pixel-perfect layouts (WCAG-compliant), and developed a PHP plugin to automate 3D model uploads to the database.
- Logistics tool (~30 corporate clients): Owned a large-scale technical debt reduction initiative, resolving ~80% of known legacy issues and significantly improving the reliability and stability of the services these corporate clients depend on. Designed and delivered document-management flows supporting worldwide goods delivery processes.

Key Skills: TypeScript, JavaScript, React, Next.js, React Query, Redux, Zustand, REST/Apollo GraphQL, API integration, data-heavy interfaces, forms and validation, loading/error states, pagination, accessibility, responsive UI, SASS, Material UI (MUI), Ant

Design, performance optimization, Jest, React Testing Library, Storybook, Vite, Webpack, ESLint, Prettier, Docker (basics).

Frontend Developer

Self-Employed | 12.2022 – 02.2024

Worked directly with clients to design, build, and ship custom web tools end to end. Built a lead-generation platform that collected and structured professional profile data into a searchable database of decision-makers for outreach campaigns, with a React interface for browsing, filtering, and managing large contact lists integrated with the data-collection backend. Also built the frontend for an internal tool that automated repetitive AWS operations. Beyond these, handled API integrations, interface and performance optimization, and responsive, adaptive UIs.

Key Skills: JavaScript, TypeScript, React, Next.js, Redux, MobX, Tailwind CSS, React Query, React Hook Form, Context API, SASS, Webpack, Vite.

Professional Development | 11.2020 – 12.2022

Institute of IT & Business Administration — Postgraduate Conversion Program
“Software Design of Information Systems”

- Earned a degree in Computer Science through an intensive, 2-year conversion program.
- **Diploma Project:** “Organization of interaction with patients of a medical clinic and its software support”
- **Key Skills:** Java (Spring Boot, Hibernate), JavaScript (React), HTML/CSS, MySQL

Software Engineer

Self-Employed | 01.2019 – 09.2020

Long-term engagement on a single mature product, already ~4 years in production at the start. Grew from intern to independently handling ~80% of incoming tickets, becoming a key contributor across frontend and backend.

- Implemented weekly donation reports and PayPal API integration with recurring payments.
- Built role-based functionality for 6 user types (principals, teachers, admins, bookkeepers, parents, students).
- Set up scheduled emails across 6 time zones and CRON jobs for weekly newsletters and for activity and error logging.

Key Skills: HTML/CSS, JavaScript, TypeScript, Bootstrap, PHP, React, PayPal API

Technical Skills

Core: TypeScript, JavaScript, React, Next.js

State & Data: Redux, Zustand, React Query, API integration, REST, Apollo GraphQL

Testing: Jest, React Testing Library, Playwright, Selenium

Build Tools: Storybook, Vite, Webpack

Styling: Material UI (MUI), Ant Design, Tailwind, SASS

Backend (working knowledge): PHP(Yii), Java (Spring Boot), Node.js, MySQL

Other: Git, ESLint, Prettier, Accessibility (WCAG), Performance Optimization

Education

Computer Science and Software Engineering – Institute of IT & Business Administration, Minsk (2022)

Completed a postgraduate conversion program specializing in “Software Design of Information Systems.” Diploma thesis: “Organization of interaction with patients of a medical clinic and its software support.”

Coursework included Java (Spring Boot + Hibernate), JavaScript (React), HTML/CSS, MySQL.

Languages

Russian (Native) | English (Upper-Intermediate B2) | Polish (Elementary A2) | Italian (Elementary A2)

Certifications

- Business Analysis — Certified
- Linux Administration — Certified
